## Usability and Interface

### Context-Sensitive Help

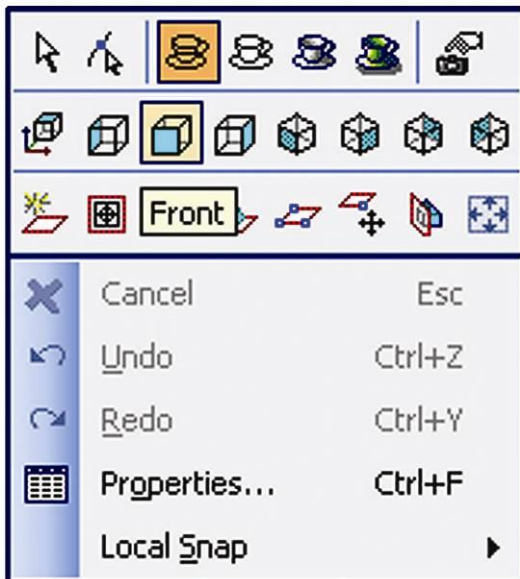

Right-click to instantly access recently used tools, recently entered values, and a quick way to change or reset reference points. If a TurboCAD tool is active, the context menu provides a contextual toolbar as well, with additional similar tools and functions.

### Flexible User Interface

Turn on and off only the tools you want to see as you work in a familiar, windows-like, customizable interface. Display TurboCAD's comprehensive set of 2D/3D design tools with full explanations in the beginner mode. Switch to intermediate or expert mode to gain screen space as you become more familiar with the program.

### Page Set Up Wizard

Breeze through questions designed to help you define your drawing's size and orientation, units of measurement, printing scale and viewpoints

### Advanced Handle-Based Editing

Save time and draw more accurately, more quickly. TurboCAD provides handles for scaling, but also for rotating, moving and aligning objects.

### Snaps & Geometric Alignment Aids

Draw lines quickly and let snap tools automatically align them with the closest center point, end point, or dozens of points you choose. Geometric alignment aids improve snap indicators.

### New Window or Crossing Selection

Users can now select objects with a mouse by using the Window or Crossing methods similar to AutoCAD<sup>®</sup>. Drag the mouse from left to right to invoke Window mode and select only objects that are entirely within the blue window. Drag the mouse from right to left to invoke Crossing mode and select only objects that touch the green Crossing window.

## Mechanical Features

TurboCAD Deluxe 18 offers innovative tools tailored to mechanical engineers and designers. Design everything from engines and mechanical parts, to circuit boards, patent drawings and more.

### 2D & 3D Boolean operations

Use two existing objects and combined, subtracted, intersected, or sliced to create a new object. Select multiple entities for addition or subtraction.

### Revolve

Move a 2D object around a revolution axis to create a 3D object.

### Extrude

Pull complex 3D models from simple 2D shapes.

### Sweeps

Extrude shapes along a path, perfect for drafting irregular objects.

### Chain Polyline

Chain Polyline allows for faster design by allowing you to connect intersecting objects or portions of objects into a single polyline which can be then extruded, revolved or swept.

### Automatic, Editable Meshes

Easily create complex meshes by entering coordinate information or importing matrix data from Excel<sup>®</sup>, then view, edit and render.

### Colour Transparency

Screen back the colour of an object in the foreground to display or emphasize hidden details in the background.

## Visualisation

TurboCAD Deluxe includes powerful, easy-to-use rendering and visualisation technology by LightWorks. It allows users to define physically accurate materials such as glass, mirrors, and polished or reflective surfaces with ray tracing, so anyone can create stunning photorealistic designs. Now, new TurboCAD Deluxe 18 offers an updated Lightworks 8.3 engine that provides progressive, ray-traced rendering which improves workflow by generating fast estimates of the image and an early preview of light settings. This new engine also supports multi-threading, taking advantage of multi core processors so the turn around time for calculations is much faster. Anti-aliasing for geometry and materials is also improved.

## Design Director

Organise, access, and explore design alternatives easily in the Design Director Palette. Create layer templates, light templates, camera templates and powerful layers for use on different designs. Layer filters, that are .dwg compatible, help you manage large, complex drawings with ease. TurboCAD Deluxe 18 layers are more AutoCAD compatible, including a new layers dialog based upon 'Design Centre'.

## Floating and Shaped Viewports

Create viewports of Model space in multiple Paper spaces. Edit your viewports by changing their shape or the layers that they display. New version 18 provides the ability to turn on/off layers per viewport. You can even render within a viewport.

## Multiple Drawings/Multiple Paper Space

Build multiple drawings, each with multiple paper spaces, with independent settings (grid units, etc.); then use tabs to quickly switch between paper spaces.

## Materials Library

Choose from or create your own realistic material patterns, transparency, reflectance, and texture types and settings as well as multiple wrapping options to make designs look like they will in real life.

## Realistic Lighting Effects

Multiple light types and settings cast hard and soft shadows and reflect accurately off reflective surfaces with ray tracing allowing you to create photorealistic designs. Fog and scattering mediums are also supported.
